

How to upload to GoExplore Lincolnshire:

Step 1: Follow the link to the wizard: <https://lincolnshire.goexploreapp.co.uk/create/intro>

Step 2: Create your walk by giving it a name, selecting your start location, giving it an interesting and fun description and then choosing an eye catching image.

The screenshot shows a form titled 'Create a Route'. Under the heading 'Route Information', there are several fields: 'Name' with the text 'Sherlocke Hoames Mystery Walk'; 'Where does the route begin?' with the text '112B Baxter Street, London'; and 'Description' with the text 'Retrace the footsteps of the legendary detective as he navigated the streets of London to find Jack the Slipper.'. Below these fields are two dropdown menus: 'Difficulty' (set to 'Choose Difficulty') and 'Accessibility' (set to 'Choose Applicable Options'). At the bottom, there are two buttons: 'Continue' and 'Clear Fields'.The screenshot shows a form titled 'Add an Image'. Below the title, it says 'Further enhance your route with an eye-catching image.'. There is a 'File' section with a 'Choose file' input field and a 'Browse' button. Below this is a large area with a grey and white checkerboard pattern, representing a missing image. At the bottom, there are two buttons: 'Upload' and 'Skip'.

Your location current has to be an address or postcode- the app does not support grid references. However once you are taken through to the map you can pick up and adjust the pin to the correct location if postcode is not accurate enough.

Your description can include the distance of the walk as this is not yet automated in the app.

Step 3: Design your route

You will then be taken to your map screen which is OS mapping. And a side panel will direct you how to create the walk. You can either upload a GPX if you have one, or drop pins to create the route. If you upload a GPX you will need to edit the pins once the route is saved. Any information that has been pulled through to the title will appear to the walker- so if you don't want it, delete it from the pin and then save.

DESIGN THE ROUTE

Welcome to the Route Creator

This is where you can flesh out the structure of your route, ready for the Go Explore app.

Building the Route

Waypoints are the bread and butter of a route, in their simplest form they allow you to define the shape of the route overall.

They can also be configured to display helpful information in the app.

Getting Started

- Click on the map to add a waypoint
- Click and drag an existing waypoint to move it
- Click on a waypoint to add more information to it
- To remove a waypoint, you can click on it and select **Delete** in the details screen

Waypoints without detailed information will only be used to define the shape of the route.

Once you have the gpx uploaded or you drop a pin you can click on the pin and add content- this is what makes all the difference. This is where you share your knowledge, thoughts and interests with your walker.

These are my pins, I have selected the second pin which is now a darker red.

I will be presented with this screen:

Title and Description:

Will both be displayed at the bottom of the app as you trigger the pin, they will not cause the phone to vibrate and will remain on screen until the next pin is triggered.

An example of information for this pin might be:

Title:

Start

Description:

Watch out for butterflies

You will then have the option to add an image.

This is highly recommended as this will show on the app as a full screen pop up. Along with the image you can then add your information which should be added to this box:

The Details box is the key to share your knowledge and expertise!

This will show up under your image as scrollable text, allowing you to inform the walker of whatever you desire. It could be an explanation of the image you entered, a fact about the location you are walking past or it could be a motivational quote.

An example based on the title and description above might be:

Description:

There are many types of butterflies in this region, did you know a group of butterflies is sometimes called a flutter and their eyes are made of 6,000 lenses and they can see ultraviolet light.

When you have finished adding content make sure you save the changes to your pin. You can then continue to plot your route.

The pins are triggered via geo-fences and as such it is important you don't put data on pins that are too close together or the geo-fences will overlap and the app won't know which to trigger.

For example I wouldn't add information to both of these pins:

But I can add data to both of these pins:

Step 4: Complete your route

Once you have finished your route and clicked FINISH you will be taken to an overview:

Confirm your Route

Here's a summary of the information you've provided

Details [Edit](#)

Name
Market rasen

Start Location
In1 2we

Description
bob

Difficulty
 Hard

Accessibility
No Accessibility Options Selected

And you will be asked if you are happy with your walk:

Are you happy with everything? If there is anything you'd like to change before submission, then you can click the **Edit** in the section that corresponds to the elements you'd like to adjust.

Clicking the **Upload Route** button will submit your route and enter it into a queue for approval before adding it to the system.

If you're unhappy with the route, you may click **Start Again** to be taken to the beginning of the process to create a new route. This will reset your current route data.

Upload Route **Start Again**

Once you have sent your route it will go to Active Lincolnshire for approval. Once it is approved it will appear on the app and you can go and walking with it.

If you use your walk and you wish to make changes to it after approval you can contact Active Lincolnshire via llara.munn@activelincolnshire.com or communications@activelincolnshire.com and the walk can be “unapproved” and sent back into your list for editing or adjustment. Once you are satisfied you simply resubmit it to the app and await approval.

Remember this is your chance to create something special, interesting, unique and fun. The more time you spend to make the walk enjoyable the better the walkers experience will be and the more likely they are to share it with friends and family.

This app is for all of Lincolnshire, the more walks we have on it the more people can explore and learn about our county. It is free and is funded by Sport England and created by Active Lincolnshire which is a charity County Sports Provider.

Your time and effort is truly appreciated and we hope that together we can create a wonderful tool to experience our county through.
